
Project Proposal:

Jack Kramer

Josh Olk

Jam with Friends:

About:

The application Josh and I will be working on will be a platform for college students to find a rehearsal space and play music. Could be in a legitimate practice space or in the back shed of someone's house. Basically one could check the availability and set up time to play there with the owner/renter on the premises. The entire point of the app is to have the user collaborate and play music with others in a room. Doesn't matter if they're playing instruments or messing around with Pro Tools on their computer. Music is the universal language that allows people to bond with each other.

Features:

See wireframe for visual representation of Features:

Initially a user will set up his or her profile and that profile will connect them with other people who have similar musical preferences.

- Once the profile is completed one can post info/music/requests to showcase who they are or look for another person that plays a specific instruments
- The **homepage** will have news and updates on things happening in the area or news stories with local bands. Also contains a search bar to find other people..
- **Sign Ups** will have a map of the available locations with a calendar and a basic form to fill out.
- **Store's and Venues** to support small local music shops and keep them above water by allowing students to know where to pick up anything related to music. External links to their websites.
- **Upcoming Concerts/Shows:** A list of upcoming shows in the area and how to get tickets through -> external links for ticket vendors.
